PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience at Mphasis working on enterprise Java backend development and Apache Kafka integrations for Fortune 500 clients — Charles Schwab and HP. Comfortable with Python, Spring Boot, REST APIs, Docker and Linux-based deployments, and have recently been building Python and React applications using LLM APIs. Looking for a full-stack role where I can take ownership of projects end to end.

TECHNICAL SKILLS

Programming: Java, Python, SQL, JavaScript, HTML, CSS

Frameworks: Spring Boot, FastAPI, ReactJS, RESTful APIs, Microservices

Databases: MySQL, PostgreSQL, Redis

Messaging: Apache Kafka (Producer, Consumer, Consumer Groups, DLQ)

DevOps & Tools: Linux, Git/GitHub, Docker, Bamboo, Harness, Ansible, Cloud Foundry, AWS EC2

Testing: JUnit, Mockito

WORK EXPERIENCE

Software Engineer — Mphasis Ltd., Bengaluru

Aug 2024 – Present

Client: HP | Java Backend Developer

- Maintained and enhanced CDAX, HP's internal parts-ordering and CE task-management platform, using Java Spring Boot, MySQL and PostgreSQL.
- Diagnosed and fixed a critical order-routing bug where orders were accepted without a valid zipcode, causing wrong deliveries; resolved with frontend and backend validation.
- Delivered end-to-end feature changes based on stakeholder requirements, including adding, modifying and deprecating application functionality.

Technologies: Java, Spring Boot, REST APIs, MySQL, PostgreSQL, Git

Client: Charles Schwab | Kafka Integration Engineer

- Led Kafka onboarding for 15+ enterprise applications, configuring topics, producers and consumers for reliable event-driven communication across distributed systems.
- Built and maintained CI/CD pipelines using Bamboo and Harness, resolving build failures and ensuring smooth deployments across all onboarded applications.
- Used Ansible to remotely configure and manage servers, ensuring consistent and repeatable deployment environments.

Technologies: Java, Apache Kafka, Spring Boot, Bamboo, Harness, Ansible, Docker, Linux

PROJECTS

E-Commerce Order Platform — Kafka Microservices

- Built an event-driven e-commerce backend with Spring Boot microservices for product catalogue, cart, and order management, with Inventory, Notification and Audit services reacting to order events through Apache Kafka.
- Designed Kafka topics with 3 partitions and key-based partitioning on order ID to preserve event ordering; each service runs in its own consumer group with manual offset commits for at-least-once delivery, and a dead-letter queue isolates failed messages.
- Secured REST APIs with JWT authentication and role-based access control; documented endpoints with Swagger/OpenAPI; wrote unit and integration tests with JUnit and Mockito.
- Containerised all services and Kafka with Docker Compose for consistent local and cloud deployment.

Technologies: Java, Spring Boot, Apache Kafka, MySQL, JWT, Swagger, JUnit, Mockito, Docker Compose

Ask-Your-Data — Natural Language to SQL Assistant

- Built a web app where users ask questions in plain English (e.g., "top 5 products by revenue last month") and get results as a table or chart, using an LLM API to generate SQL over a PostgreSQL orders dataset.
- Passed the database schema to the model as context, and added safeguards: only SELECT queries are accepted, queries run under a read-only database role, and results are row-limited.
- Backend in Python/FastAPI with a React frontend; tested the generated queries against a set of sample questions and refined the prompts where results were wrong.

Technologies: Python, FastAPI, React, PostgreSQL, LLM API, Docker, AWS EC2

EDUCATION

B.E. — Electronics & Telecommunication, PES University, Bengaluru

2024
